

Internal Shading Instruction Manual

Made in the United Kingdom

Please read all instructions before proceeding

Internal Shading Installation

To install the internal shading blinds to your Alton Evolution greenhouse you will need to temporarily remove the ridge braces. With the braces removed you will be able to position the roller blind parallel to the underside of the ridge (diagram 1). Fix this in place with round head screws.

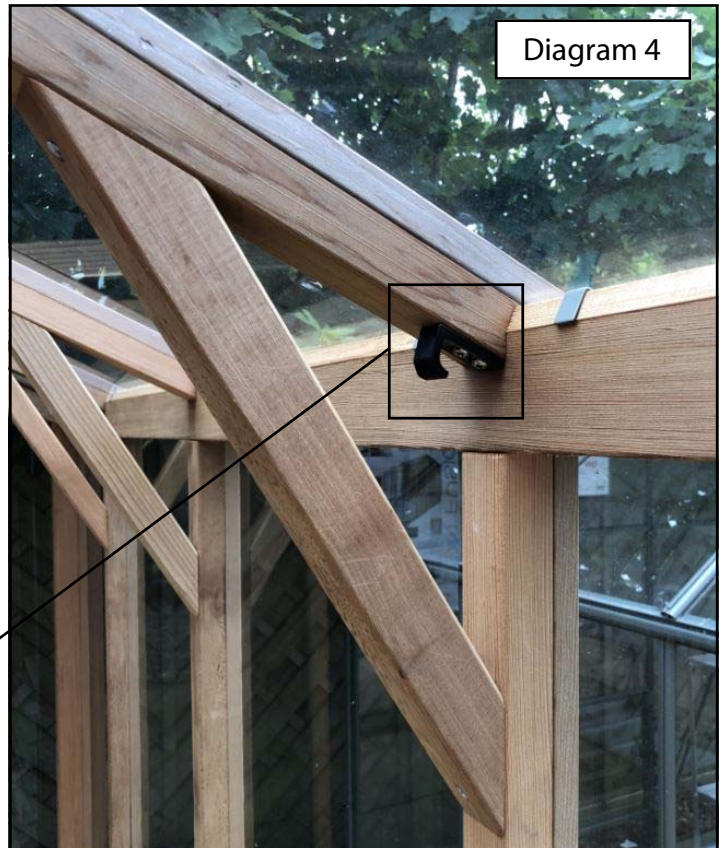

Where a roller blind meets a gable end you will need adjust the direction of the flange (diagram 2). Using an adjustable spanner clamp this onto the flange with the fixing hole in and bend it upwards. You will now be able to fix this inline with the other blinds.

With all the blinds in place you can re-attach any bracing you removed.

Internal Shading Installation

Now fit the universal hooks to the underside of the roof glazing bars (diagram 5). These fit neatly side by side if you have multiple blinds (diagram 6). The hook that is fixed to the gable end is in a slightly different position due to the bigger section (diagram 7). This means that the bottom of the blind is at a slight angle, this will not effect how the blind functions.
